Five reasons you should upgrade to EMV acceptance

- 1. Fight Fraudsters:** Chip cards generate a one-time code with every transaction making it nearly impossible to create counterfeit cards for use in stores.
- 2. Build Customer Trust:** Consumers are increasingly concerned with card data protection. Give them peace-of-mind when they choose your restaurant.
- 3. Limit Your Fraud Chargeback Risk:** As of October 1, 2015, new network rules mean merchants are more likely to be financially liable for fraud, lost/stolen transactions at their in-store locations without [EMV compliance](#).
- 4. Ability to Accept New Payment Technologies:** Accept mobile and contactless payments such as Apple Pay and Android Pay when you upgrade your terminal or POS system. Most new payment acceptance devices not only support EMV cards, but also process [NFC mobile transactions](#), such as Apple Pay.
- 5. Improve Customer Experience:** Allow customers to have a safe and seamless experience. Consumers know that the new cards will help them shop safer, so they will choose merchants who take this seriously and strive to sell safely via EMV acceptance.
